

PRODUCT DATA SHEET

Pencan NRFit®

Spinal needle with Pencil Point bevel type and NRFit® connector for intrathecal injections and diagnostic lumbar puncture

Pencan needles type NRFit® have got a proprietary Pencil Point bevel and are used to perform Lumbar punctures (diagnosis) and Spinal anesthesia (Injection of local anesthetics into the subarachnoid space for diagnosis, operative procedures and pain management).

Regional Anesthesia product with NRFit® connector, in line with the ISO Standard 80369-6.

Advantages

- **Atraumatic Pencil Point Design Tip:** Allows for minimal intrathecal penetration depth and reduced risk of incomplete blocks and PDPH occurrence
- **Ergonomic Hub:** Designed for enhanced needle control, improved grip and tactile feedback
- **CSF ID System:** For improved visualization of CSF flashback in the needle hub aiding proper needle placement
- **Tritan Hub Material:** Stress-crack resistant, highly transparent, free of: Latex/Natural Rubber, BPA, DEHP, PVC
- Comprehensive portfolio: Lengths ranging from 25 mm to 156 mm and gauges sizes from 22 G to 27 G – **pediatric sizes available**
