

PRODUCT DATA SHEET

Spinocan®

Spinal needle with Quincke bevel type for intrathecal injections and diagnostic lumbar puncture

Spinocan® needles have got a Quincke bevel and are used to perform Lumbar punctures (diagnosis) and Spinal anesthesia (Injection of local anesthetics into the subarachnoid space for diagnosis, operative procedures and pain management).

Advantages

- **Quincke bevel:** Sharp bevel for low puncture force
- **Ergonomic Hub:** Designed for enhanced needle control, improved grip and tactile feedback
- **CSF ID System:** Prisma and magnifying lense for improved visualization of CSF flashback in the needle hub aiding proper needle placement
- **Tritan Hub Material:** Stress-crack resistant, highly transparent, free of: Latex, BPA, DEHP, PVC
- **Comprehensive portfolio:** Lengths ranging from 40 mm to 156 mm and gauges sizes from 18 G to 29 G – **pediatric sizes available**
