Description

ENERGY HEAT REGULATING BAG

Heat regulating bag for the warming of IV liquids. Used as an active source of heat is indicated for the prevention and treatment of hypothermia.
Ideal for emergency medicine, hospitals and field camps.
Its compact design allows for use both hung on the stretcher or in the ambulance as a bottle holder or inside bigger containers.
The infusion liquids remain at a constant temperature and the IV liquids can be transported out of the ambulance for a short period.
The main compartment is heated by an electrically fed resistive pad.

Supplied with front pocket for the electric power supply cable, transparent identity pocket, cable with plug, adjustable shoulder strap and manual GB, IT.

Made in Italy.

Technical Specifications

Padding material: outside PVC, inside nylon 210
